

Below is a comprehensive, exam-style set of **multiple-choice questions (MCQs)** for **Exam AI-900: Microsoft Azure AI Fundamentals**—focused entirely on **service selection** scenarios. I've structured them into the six topic blocks you asked for, with **answers and concise explanations** under each question. Where a fact about an Azure service is used, I've **cited Microsoft Learn** so you can double-check or go deeper.

Part 1 — 50 MCQs: Selection of Microsoft Azure AI Service

Theme: Given a scenario, choose the *most appropriate* Azure AI service (or combination) to implement it.

1. **You need to add near real-time language translation to a web chat across 80+ languages. Which service should you choose?**
 - A. Azure AI Language
 - B. Azure AI Translator
 - C. Azure AI Speech
 - D. Azure OpenAI

Answer: B

Explanation: **Azure AI Translator** is the Azure service for **text and document translation**, with REST APIs and broad language coverage. It also supports transliteration and dictionary lookup. [\[learn.microsoft.com\]](#), [\[learn.microsoft.com\]](#)

2. **You must extract key-value pairs and tables from vendor invoices and return structured JSON. Which service fits best?**
 - A. Azure AI Document Intelligence
 - B. Azure AI Vision (OCR)
 - C. Azure AI Search
 - D. Azure AI Language

Answer: A

Explanation: **Azure AI Document Intelligence** (formerly Form Recognizer) provides **prebuilt invoice models** and returns structured **key-value pairs and tables**—ideal for invoices. [\[learn.microsoft.com\]](#), [\[learn.microsoft.com\]](#)

3. **Your mobile app needs to read printed and handwritten text from images. Which service is purpose-built?**
 - A. Azure AI Vision – OCR (Read)
 - B. Azure AI Language
 - C. Azure AI Document Intelligence
 - D. Azure OpenAI with Vision

Answer: A

Explanation: The **Vision OCR (Read)** API extracts printed and handwritten text from images in various formats and languages. [\[learn.microsoft.com\]](#)

4. **You want to build a “chat with my documents” experience using your enterprise content as ground truth for LLM answers. What combination is most appropriate?**
 - A. Azure AI Vision + Azure AI Speech

- B. Azure OpenAI + Azure AI Search (RAG)
- C. Azure AI Language only
- D. Azure AI Translator + Azure AI Speech

Answer: B

Explanation: Retrieval-Augmented Generation (RAG) pairs **Azure OpenAI** with **Azure AI Search** for **grounded answers** using indexed enterprise data. [\[learn.microsoft.com\]](#), [\[learn.microsoft.com\]](#), [\[learn.microsoft.com\]](#)

5. **You need to moderate user prompts and model outputs for safety (hate/violence/self-harm) and apply guardrails like prompt shields. Which service?**
- A. Azure AI Content Safety
 - B. Azure AI Language
 - C. Azure AI Translator
 - D. Azure AI Vision

Answer: A

Explanation: **Azure AI Content Safety** provides **text/image moderation**, prompt shields, and groundedness detection for generative AI applications. [\[learn.microsoft.com\]](#), [\[learn.microsoft.com\]](#)

6. **For automatic speaker diarization and real-time speech-to-text in customer support calls, which Azure AI service is best?**
- A. Azure AI Language
 - B. Azure AI Speech
 - C. Azure AI Translator
 - D. Azure OpenAI only

Answer: B

Explanation: **Azure AI Speech** supports **speech-to-text** with **speaker recognition/diarization** and real-time transcription APIs/SDKs. [\[learn.microsoft.com\]](#)

7. **You need a low-code portal to index video files and extract faces, labels, topics, and transcripts quickly. Choose the service.**
- A. Azure AI Video Indexer
 - B. Azure AI Vision
 - C. Azure AI Search
 - D. Azure OpenAI

Answer: A

Explanation: **Azure AI Video Indexer** extracts rich video/audio insights and provides a **web portal** for quick indexing and exploration. [\[learn.microsoft.com\]](#), [\[learn.microsoft.com\]](#)

8. **A learning app must provide read-aloud, line focus, and on-the-fly translation to improve reading comprehension for students. Which service?**
- A. Azure AI Speech
 - B. Azure AI Immersive Reader
 - C. Azure AI Translator
 - D. Azure AI Language

Answer: B

Explanation: **Immersive Reader** is an **Applied AI** service designed to improve reading

comprehension with read-aloud, translation, and focus tools. [\[learn.microsoft.com\]](https://learn.microsoft.com), [\[azure.microsoft.com\]](https://azure.microsoft.com)

9. **Your website needs image tagging, adult content detection, and auto-generated captions from photos. Which service?**

A. Azure AI Vision – Image Analysis
B. Azure AI Language
C. Azure AI Custom Vision
D. Azure AI Search

Answer: A

Explanation: **Image Analysis** detects objects, adult content, and can generate captions and tags from images. [\[learn.microsoft.com\]](https://learn.microsoft.com)

10. **You must build a custom image classifier for your specific product catalog with minimal ML effort. Which service?**

A. Azure AI Vision – Image Analysis
B. Azure AI Custom Vision
C. Azure OpenAI (vision)
D. Azure AI Search

Answer: B

Explanation: **Custom Vision** lets you **train custom classifiers/detectors** for domain-specific images via an easy workflow. [\[learn.microsoft.com\]](https://learn.microsoft.com)

11. **A financial operations bot needs sentiment analysis and key-phrase extraction from customer emails. Which service is best?**

A. Azure AI Language – Text Analytics
B. Azure AI Translator
C. Azure OpenAI alone
D. Azure AI Search

Answer: A

Explanation: **Text Analytics** in **Azure AI Language** provides **sentiment analysis, key-phrase extraction, NER, and PII detection**. [\[learn.microsoft.com\]](https://learn.microsoft.com)

12. **You are migrating an FAQ knowledge base from QnA Maker. Which feature should you use now?**

A. Azure AI Language – Question Answering
B. Azure AI Search – Indexers
C. Azure OpenAI – Chat
D. Azure AI Content Safety

Answer: A

Explanation: **Question Answering** in **Azure AI Language** replaces **QnA Maker** and provides prebuilt QA over documents/URLs. [\[learn.microsoft.com\]](https://learn.microsoft.com)

13. **You want to summarize meeting transcripts automatically. Choose the best service.**

A. Azure AI Language – Summarization
B. Azure AI Translator
C. Azure AI Vision
D. Azure AI Search

Answer: A

Explanation: **Azure AI Language** includes **document and conversation summarization** features. [\[learn.microsoft.com\]](https://learn.microsoft.com)

14. **You need to detect faces, analyze facial attributes, and implement privacy-friendly identification workflows in images. Which service?**

A. Azure AI Vision – Face
B. Azure AI Document Intelligence
C. Azure AI Language
D. Azure AI Search

Answer: A

Explanation: The **Face** service detects and analyzes human faces, with scenarios like identification and privacy workflows. [\[learn.microsoft.com\]](https://learn.microsoft.com)

15. **A multilingual support center needs call transcription and on-the-fly spoken translation. Which service or combination?**

A. Azure AI Speech (STT + translation)
B. Azure AI Translator only
C. Azure AI OpenAI only
D. Azure AI Language only

Answer: A

Explanation: **Azure AI Speech** supports **speech-to-text** and **speech translation** for multilingual voice scenarios. [\[learn.microsoft.com\]](https://learn.microsoft.com)

16. **You must index PDFs, images, Word docs, and PPTX, then enable vector + keyword search for RAG. What core service do you use?**

A. Azure AI Vision
B. Azure AI Search
C. Azure AI Language
D. Azure AI Translator

Answer: B

Explanation: **Azure AI Search** provides **indexing** (including AI enrichment), **vector search**, and **semantic ranking** for RAG/agent retrieval scenarios. [\[learn.microsoft.com\]](https://learn.microsoft.com), [\[learn.microsoft.com\]](https://learn.microsoft.com)

17. **A support bot must be deployed over Teams with a low-code experience. Which platform helps most?**

A. Azure AI Bot Service + Microsoft Copilot Studio
B. Azure AI Language
C. Azure AI Search
D. Azure AI Vision

Answer: A

Explanation: **Azure AI Bot Service** integrates with **Copilot Studio** for low-code agents and publishing to **Teams/Copilot**. [\[learn.microsoft.com\]](https://learn.microsoft.com), [\[learn.microsoft.com\]](https://learn.microsoft.com)

18. **You need to flag risky user prompts that attempt jailbreak or indirect injection attacks. Which service should you use?**

A. Azure AI Language – sentiment

- B. Azure AI Content Safety – Prompt Shields
- C. Azure AI Search
- D. Azure AI OpenAI – GPT guardrails

Answer: B

Explanation: **Prompt Shields** in **Azure AI Content Safety** detects jailbreak and indirect prompt injection risks. [\[learn.microsoft.com\]](https://learn.microsoft.com)

19. **Your system must detect potential anomalies across multi-sensor IoT time series in Azure. Which statement is most accurate (2025)?**

- A. Use Azure AI Anomaly Detector—fully supported for new resources.
- B. Use Azure AI Anomaly Detector—existing resources only; it's retiring.
- C. Use Azure AI Personalizer—decision service.
- D. Use Azure AI Document Intelligence.

Answer: B

Explanation: **Anomaly Detector cannot be created new** since **Sept 20, 2023** and is **retiring Oct 1, 2026**; consider alternatives like **ADX** or **ML custom models**.
[\[learn.microsoft.com\]](https://learn.microsoft.com), [\[learn.microsoft.com\]](https://learn.microsoft.com)

20. **You need a reading experience tailored for language learners with easy SDK integration. Choose the service.**

- A. Azure AI Immersive Reader
- B. Azure AI Speech
- C. Azure AI Translator
- D. Azure AI Language

Answer: A

Explanation: **Immersive Reader** offers inclusively designed reading tools, SDKs, and proven comprehension features. [\[learn.microsoft.com\]](https://learn.microsoft.com)

21. **To build a knowledge mining solution that enriches data during indexing (entities, OCR), which service provides skillsets and indexers?**

- A. Azure AI Search
- B. Azure AI Language
- C. Azure AI Vision
- D. Azure OpenAI

Answer: A

Explanation: **AI enrichment with skillsets and indexers** is part of **Azure AI Search**, enabling knowledge mining over diverse sources. [\[learn.microsoft.com\]](https://learn.microsoft.com), [\[learn.microsoft.com\]](https://learn.microsoft.com)

22. **You want to moderate both text and images uploaded by users before they are stored or shown. Which service fits?**

- A. Azure AI Content Safety
- B. Azure AI Translator
- C. Azure AI Speech
- D. Azure AI Language

Answer: A

Explanation: **Content Safety** moderates **text and images** and supports **multimodal** analysis with harm categories. [\[learn.microsoft.com\]](https://learn.microsoft.com)

23. **A retail catalog needs domain-specific image classification (e.g., shoe styles). Which service should you train?**

- A. Azure AI Custom Vision
- B. Azure AI Vision – Image Analysis
- C. Azure AI Document Intelligence
- D. Azure AI Language

Answer: A

Explanation: **Custom Vision** trains classifiers specific to your domain with minimal ML overhead. [\[learn.microsoft.com\]](https://learn.microsoft.com)

24. **You need to extract entities, PII, and sentiments from customer feedback at scale. Which service?**

- A. Azure AI Language – Text Analytics
- B. Azure AI Translator
- C. Azure AI Vision
- D. Azure AI Speech

Answer: A

Explanation: **Text Analytics** covers **NER**, **PII detection**, and **sentiment** for textual feedback. [\[learn.microsoft.com\]](https://learn.microsoft.com)

25. **A call analytics solution needs batch transcription of large audio files stored in Blob Storage. Which capability?**

- A. Azure AI Speech – Batch Transcription
- B. Azure AI Language – Summarization
- C. Azure AI Translator – Document translation
- D. Azure OpenAI – Chat completions

Answer: A

Explanation: **Batch transcription** is a capability of **Azure AI Speech** via REST API/CLI to process audio at scale. [\[learn.microsoft.com\]](https://learn.microsoft.com)

26. **You want to index SharePoint and Blob content and enable semantic ranking and vector search for Copilot-style Q&A. Choose the service.**

- A. Azure AI Search
- B. Azure AI Language
- C. Azure AI Document Intelligence
- D. Azure AI Translator

Answer: A

Explanation: **Azure AI Search** supports **vector/hybrid search**, **semantic ranker**, and knowledge sources for agentic retrieval. [\[learn.microsoft.com\]](https://learn.microsoft.com), [\[learn.microsoft.com\]](https://learn.microsoft.com)

27. **A multilingual FAQ site needs language detection and routing before translation. Which service provides these features?**

- A. Azure AI Translator – Text translation (detect + translate)
- B. Azure AI Language
- C. Azure AI Search
- D. Azure AI Speech

Answer: A

Explanation: **Translator v3** supports **language detection** and **translation** in a single call; preview adds LLM options. [\[learn.microsoft.com\]](#), [\[learn.microsoft.com\]](#)

28. **You want to automatically extract tables and key data from PDFs and then index results into Azure AI Search. Which service leads the extraction?**

A. Azure AI Document Intelligence
B. Azure AI Vision – OCR
C. Azure AI Language
D. Azure OpenAI

Answer: A

Explanation: **Document Intelligence** extracts **tables, key-value pairs** from documents; its outputs can feed **Azure AI Search**. [\[learn.microsoft.com\]](#)

29. **A customer support assistant must answer questions over unstructured docs (PDFs) without manual labeling. Which approach fits best?**

A. Azure AI Language – QnA Maker
B. Azure AI Language – Question Answering
C. Azure AI Document Intelligence only
D. Azure AI Content Safety

Answer: B

Explanation: **Question Answering** can auto-generate answers from docs/URLs; **QnA Maker** is retired. [\[learn.microsoft.com\]](#)

30. **Your app needs to detect adult/violent content in images before publishing user photos. Which service?**

A. Azure AI Vision – Image Analysis
B. Azure AI Content Safety (image)
C. Azure AI Custom Vision
D. Azure AI Translator

Answer: A (or B acceptable depending on policy)

Explanation: **Image Analysis** flags adult/racy content directly; **Content Safety (image)** provides harm category moderation depending on scenario. [\[learn.microsoft.com\]](#), [\[learn.microsoft.com\]](#)

31. **You are asked to retire usage of Azure Personalizer in a new project. Why is this recommended?**

A. It doesn't support reinforcement learning.
B. It requires deep ML expertise.
C. The service is scheduled for retirement (new resources blocked).
D. It only runs on containers.

Answer: C

Explanation: **Personalizer** cannot create new resources since **Sept 20, 2023** and is **retiring Oct 1, 2026**. [\[learn.microsoft.com\]](#), [\[learn.microsoft.com\]](#)

32. **You want to add image-understanding to LLM chat (send an image + question). Which is the simplest option?**

A. Azure AI Vision – Image Analysis only
B. Azure OpenAI vision-enabled chat models (GPT-4o/5 series)

- C. Azure AI Language
- D. Azure AI Translator

Answer: B

Explanation: **Vision-enabled chat models** in **Azure OpenAI** can accept images in chat and return textual answers. [\[learn.microsoft.com\]](https://learn.microsoft.com)

33. **Which service provides read-aloud with adjustable speed/voice as part of an inclusive reading experience?**

- A. Azure AI Speech – TTS only
- B. Azure AI Immersive Reader
- C. Azure AI Translator
- D. Azure AI Language

Answer: B

Explanation: **Immersive Reader** includes configurable **Read Aloud** with voice/speed and other literacy features. [\[learn.microsoft.com\]](https://learn.microsoft.com)

34. **You need to build a bot with custom code (C#/JS) and deploy it to Azure with rich channel support. Which service helps?**

- A. Azure AI Bot Service (Bot Framework SDK)
- B. Azure AI Language
- C. Azure AI Search
- D. Azure OpenAI only

Answer: A

Explanation: **Bot Service** with **Bot Framework SDK** supports full-code bots and multi-channel connectivity (Teams, web, telephony). [\[learn.microsoft.com\]](https://learn.microsoft.com)

35. **You need to detect PII in text to mask sensitive data before storing logs. Which service?**

- A. Azure AI Language – PII detection
- B. Azure AI Content Safety
- C. Azure AI Translator
- D. Azure AI Speech

Answer: A

Explanation: **Azure AI Language** provides **PII detection** in Text Analytics. [\[learn.microsoft.com\]](https://learn.microsoft.com)

36. **Your app requires speaker verification (who is speaking) on recorded audio. Which service supports this?**

- A. Azure AI Speech
- B. Azure AI Language
- C. Azure AI Translator
- D. Azure OpenAI

Answer: A

Explanation: **Azure AI Speech** supports **speaker recognition** features along with STT/TTS and translation. [\[learn.microsoft.com\]](https://learn.microsoft.com)

37. **You need to enrich indexing with OCR and entity detection from images and PDFs for search. Which single service orchestrates this pipeline?**

- A. Azure AI Vision only
- B. Azure AI Search (skillsets + indexers)
- C. Azure AI Document Intelligence only
- D. Azure AI Language only

Answer: B

Explanation: **Azure AI Search skillsets** perform OCR, entity extraction, and more during indexing for knowledge mining. [\[learn.microsoft.com\]](https://learn.microsoft.com)

38. **To detect hateful content in user-generated text and image memes, which service should you apply?**

- A. Azure AI Content Safety
- B. Azure AI Language – sentiment
- C. Azure AI Vision – Image Analysis only
- D. Azure AI Translator

Answer: A

Explanation: **Content Safety** moderates **text and images** with harm categories and blocklists. [\[learn.microsoft.com\]](https://learn.microsoft.com)

39. **You must transcribe audio at scale offline and store transcripts. Which capability in Speech applies?**

- A. Real-time transcription only
- B. Batch transcription
- C. Pronunciation assessment only
- D. Speech synthesis

Answer: B

Explanation: **Batch transcription** processes stored audio content in bulk. [\[learn.microsoft.com\]](https://learn.microsoft.com)

40. **A knowledge bot must use confidence scores to decide whether to answer or escalate. Which documentation helps?**

- A. Azure AI Bot Service – Knowledge bot design patterns
- B. Azure AI Language – Sentiment
- C. Azure AI Search – Indexers
- D. Azure AI OpenAI – Models page

Answer: A

Explanation: **Design knowledge bots** guidance explains **confidence scores** usage with knowledge bases and intent recognition. [\[learn.microsoft.com\]](https://learn.microsoft.com)

41. **You need to translate full documents (DOCX/PDF) in bulk with language detection. Which feature fits?**

- A. Azure AI Translator – Document translation
- B. Azure AI Language
- C. Azure AI Search
- D. Azure AI Speech

Answer: A

Explanation: **Document translation** is a specific **Translator feature** for bulk document conversions. [\[learn.microsoft.com\]](https://learn.microsoft.com)

42. **You need vector search, semantic ranker, and agentic retrieval features—what service provides these?**

- A. Azure AI Search
- B. Azure AI Language
- C. Azure AI Document Intelligence
- D. Azure OpenAI

Answer: A

Explanation: **Azure AI Search** supports **vector/hybrid, semantic ranker, agentic retrieval**, and knowledge bases. [\[learn.microsoft.com\]](#), [\[learn.microsoft.com\]](#)

43. **Your organization wants built-in moderation + groundedness detection for LLM responses. Which service?**

- A. Azure AI Content Safety
- B. Azure AI Language
- C. Azure AI Translator
- D. Azure AI Search

Answer: A

Explanation: **Content Safety** offers **groundedness detection** and moderation for AI outputs. [\[learn.microsoft.com\]](#)

44. **You need an inclusive reading experience SDK for iOS/Android/web. Choose the service.**

- A. Azure AI Immersive Reader
- B. Azure AI Speech
- C. Azure AI Translator
- D. Azure AI Document Intelligence

Answer: A

Explanation: **Immersive Reader** provides SDKs for multiple platforms and literacy features. [\[learn.microsoft.com\]](#)

45. **A media team wants to extract insights and create video summaries using LLM prompts without reindexing videos. Which service feature applies?**

- A. Azure AI Vision
- B. Azure AI Video Indexer with LLM prompts
- C. Azure AI Language
- D. Azure OpenAI only

Answer: B

Explanation: **Video Indexer** integrates **LLM prompts** for summaries/searchability using existing indexed insights—no reindexing needed. [\[learn.microsoft.com\]](#)

46. **For enterprise search over OneLake, Cosmos DB, and Blob with ingestion controls and ACLs, choose the service.**

- A. Azure AI Search
- B. Azure AI Language
- C. Azure AI Translator
- D. Azure AI Speech

Answer: A

Explanation: **Azure AI Search** connects to diverse sources with **indexers**, supports **ingestion parameters**, and ACL handling. [\[learn.microsoft.com\]](https://learn.microsoft.com)

47. **You want to publish an agent to Microsoft 365 Copilot and Teams, provisioning an Azure Bot automatically. Which workflow applies?**

- A. Azure AI Bot Service + Foundry Agent publishing
- B. Azure AI Language
- C. Azure AI Vision
- D. Azure AI Translator

Answer: A

Explanation: **Foundry Agent Service** can publish agents to **M365 Copilot/Teams** and provision an **Azure Bot Service** resource. [\[learn.microsoft.com\]](https://learn.microsoft.com)

48. **You require text moderation in disconnected environments (edge) via containers. Which service offers containerized moderation?**

- A. Azure AI Content Safety containers (preview)
- B. Azure AI Language containers
- C. Azure AI Translator containers
- D. Azure AI Speech containers

Answer: A

Explanation: **Content Safety** supports **text/image containers** (preview), with metering/billing requirements. [\[learn.microsoft.com\]](https://learn.microsoft.com)

49. **You need to quickly add image captions, tags, and OCR to build a lightweight DAM pipeline. Which service is primary?**

- A. Azure AI Vision
- B. Azure AI Document Intelligence
- C. Azure AI Search only
- D. Azure AI Translator

Answer: A

Explanation: **Azure Vision** provides **OCR, captions, tags** useful in digital asset scenarios; can pair with Search. [\[learn.microsoft.com\]](https://learn.microsoft.com)

50. **Which statement about Azure OpenAI models in 2025 is correct?**

- A. Azure OpenAI only offers GPT-3.5.
- B. Azure OpenAI offers GPT-4o/GPT-5 series among others, with enterprise safety features.
- C. Azure OpenAI doesn't support private networking.
- D. Azure OpenAI uses customer data to retrain models by default.

Answer: B

Explanation: **Azure OpenAI** provides **GPT-4o/5 series and others** with **Azure security, VNET/private endpoints**, and **does not use customer data to retrain**. [\[learn.microsoft.com\]](https://learn.microsoft.com), [\[learn.microsoft.com\]](https://learn.microsoft.com)

Part 2 — 10 MCQs: Select the appropriate service for a decision support solution

51. **To surface decision-ready answers from internal policies with citations, your best baseline is:**

- A. Azure AI Search + Azure OpenAI (RAG)
- B. Azure AI Translator only
- C. Azure AI Vision
- D. Azure AI Speech

Answer: A

Explanation: RAG using Search for retrieval and OpenAI for synthesis yields grounded, citation-backed responses. [\[learn.microsoft.com\]](#), [\[learn.microsoft.com\]](#)

52. **You need anomaly detection over time-series signals to trigger interventions.**

Considering service lifecycle, choose the path:

- A. Start new with Azure AI Anomaly Detector
- B. Use existing Anomaly Detector resources or move to ADX/ML alternatives
- C. Use Azure AI Personalizer
- D. Use Azure AI Vision

Answer: B

Explanation: Anomaly Detector is retiring; consider Azure Data Explorer or custom ML for new solutions. [\[learn.microsoft.com\]](#), [\[learn.microsoft.com\]](#)

53. **A decision support copilot must summarize long documents and suggest next steps.**

Which service helps summarize text?

- A. Azure AI Language – Summarization
- B. Azure AI Translator
- C. Azure AI Vision
- D. Azure AI Speech

Answer: A

Explanation: Azure AI Language includes document/conversation summarization suitable for decision support. [\[learn.microsoft.com\]](#)

54. **To implement safety checks ensuring model outputs adhere to task instructions and block misaligned actions, use:**

- A. Azure AI Content Safety – Task Adherence (preview)
- B. Azure AI Translator
- C. Azure AI Search
- D. Azure AI Speech

Answer: A

Explanation: Task Adherence (preview) identifies misaligned LLM behavior/tool invocations to protect workflows. [\[learn.microsoft.com\]](#)

55. **Your solution needs confidence scoring over search answers to decide whether to escalate. Guidance comes from:**

- A. Bot Service design patterns for knowledge bots
- B. Azure AI Vision docs
- C. Translator reference
- D. Content Safety quickstarts

Answer: A

Explanation: **Knowledge bot design** documentation explains **confidence scores** usage and thresholds. [\[learn.microsoft.com\]](https://learn.microsoft.com)

56. **You want to extract structured insights from contracts before ranking them in a decision dashboard. Start with:**

- A. Azure AI Document Intelligence → Azure AI Search
- B. Azure AI Vision → Azure AI Translator
- C. Azure AI Speech → Azure AI Language
- D. Azure OpenAI only

Answer: A

Explanation: Use **Document Intelligence** to extract entities/tables, then index with **Search** for decision views. [\[learn.microsoft.com\]](https://learn.microsoft.com), [\[learn.microsoft.com\]](https://learn.microsoft.com)

57. **A multilingual help-desk must auto-detect language and route to appropriate models. Which service provides detection?**

- A. Azure AI Translator – Detect API
- B. Azure AI Language – Detect Language
- C. Either A or B
- D. Azure AI Speech only

Answer: C

Explanation: Both **Translator** and **Language** provide **language detection** APIs for routing. [\[learn.microsoft.com\]](https://learn.microsoft.com), [\[learn.microsoft.com\]](https://learn.microsoft.com)

58. **A governance team wants to detect protected text (e.g., lyrics) in LLM output to avoid copyright risks. Use:**

- A. Azure AI Content Safety – Protected material detection
- B. Azure AI Language
- C. Azure AI Translator
- D. Azure AI Search

Answer: A

Explanation: **Protected material detection** flags known protected text/code from LLM outputs. [\[learn.microsoft.com\]](https://learn.microsoft.com)

59. **You need an “explainable” ranking of documents supporting decisions with semantic relevance. Which service contributes most?**

- A. Azure AI Search – Semantic ranking
- B. Azure AI Language – Sentiment
- C. Azure AI Document Intelligence – Layout
- D. Azure AI Translator

Answer: A

Explanation: **Semantic ranker** improves relevance ranking in Search to support decision workflows. [\[learn.microsoft.com\]](https://learn.microsoft.com)

60. **Personalized recommendations were planned with Azure Personalizer. What should you do in new projects (2025)?**

- A. Proceed; service is expanding.
- B. Avoid new resources and consider alternatives; service is retiring.
- C. Switch to Anomaly Detector.

D. Use Azure Vision.

Answer: B

Explanation: **Personalizer** has **blocked new resources** since 2023 and **retires in 2026**; consider custom ML/OpenAI alternatives. [\[learn.microsoft.com\]](https://learn.microsoft.com)

Part 3 — 10 MCQs: Select the appropriate service for a vision solution

61. **You need OCR from photos of receipts and whiteboards. Which service?**

- A. Azure AI Vision – OCR (Read)
- B. Azure AI Document Intelligence – General Document
- C. Azure AI Language
- D. Azure OpenAI

Answer: A

Explanation: **Vision OCR** extracts text from images across surfaces like receipts and whiteboards. [\[learn.microsoft.com\]](https://learn.microsoft.com)

62. **Your team wants to auto-caption product images and assign tags for search. Choose the service.**

- A. Azure AI Vision – Image Analysis
- B. Azure AI Custom Vision
- C. Azure AI Language
- D. Azure AI Search

Answer: A

Explanation: **Image Analysis** generates **captions** and **tags** and detects objects/adult content. [\[learn.microsoft.com\]](https://learn.microsoft.com)

63. **You need a custom object detector for unique devices in factory photos. Which service?**

- A. Azure AI Custom Vision (object detection)
- B. Azure AI Vision – Image Analysis
- C. Azure AI Language
- D. Azure AI Speech

Answer: A

Explanation: **Custom Vision** supports **custom object detection** workflows. [\[learn.microsoft.com\]](https://learn.microsoft.com)

64. **A broadcaster wants automated face detection and identification in archives. Which vision component applies?**

- A. Azure AI Vision – Face
- B. Azure AI Document Intelligence
- C. Azure AI Language
- D. Azure AI Translator

Answer: A

Explanation: The **Face** service provides **face detection/analysis** and identification capabilities. [\[learn.microsoft.com\]](https://learn.microsoft.com)

65. **Your media team needs multimodal insights and transcripts from videos without coding much. Which service fits best?**

- A. Azure AI Video Indexer
- B. Azure AI Vision
- C. Azure AI Search
- D. Azure AI Language

Answer: A

Explanation: Video Indexer extracts **transcripts, labels, faces** etc., through a web portal and APIs. [\[learn.microsoft.com\]](https://learn.microsoft.com)

66. **You must run live video analytics at the edge with Kubernetes. Which offering supports this?**

- A. Azure AI Video Indexer enabled by Arc (live analysis)
- B. Azure AI Vision only
- C. Azure AI Search
- D. Azure OpenAI

Answer: A

Explanation: Video Indexer enabled by Arc supports **live analysis** in edge environments via Azure Arc. [\[learn.microsoft.com\]](https://learn.microsoft.com), [\[learn.microsoft.com\]](https://learn.microsoft.com)

67. **A DAM pipeline needs OCR + tags + captions from images, then searchable metadata. Which flow is best?**

- A. Azure AI Vision → Azure AI Search
- B. Azure AI Document Intelligence → Azure AI Language
- C. Azure AI Translator → Azure AI Speech
- D. Azure OpenAI only

Answer: A

Explanation: Use Vision to extract image metadata, then **Search** to index and query. [\[learn.microsoft.com\]](https://learn.microsoft.com), [\[learn.microsoft.com\]](https://learn.microsoft.com)

68. **You want to build a chat experience that understands images (e.g., “What’s in this photo?”). Which is simplest?**

- A. Azure AI Vision only
- B. Azure OpenAI vision-enabled chat
- C. Azure AI Language
- D. Azure AI Translator

Answer: B

Explanation: Vision-enabled chat models in **Azure OpenAI** accept images and produce text answers. [\[learn.microsoft.com\]](https://learn.microsoft.com)

69. **For extracting text from PDFs scanned as images, with handwriting support, prefer:**

- A. Azure AI Vision – OCR
- B. Azure AI Document Intelligence – Read/Layout
- C. Either A or B, depending on workflow
- D. Azure AI Language

Answer: C

Explanation: **Vision OCR** is image-centric; **Document Intelligence Read/Layout** are document-centric. Choose based on pipeline. [\[learn.microsoft.com\]](#), [\[learn.microsoft.com\]](#)

70. **You need to detect people/vehicles in live streams and create custom insights via natural language definitions. Which service?**

- A. Azure AI Video Indexer (live insights catalog)
- B. Azure AI Vision
- C. Azure AI Search
- D. Azure AI Language

Answer: A

Explanation: **Video Indexer live insights** supports people/vehicle detection and **custom insights** via open vocabulary prompts. [\[learn.microsoft.com\]](#)

Part 4 — 10 MCQs: Select the appropriate service for a language analysis solution

71. **You must classify documents by topic and detect sentiment. Which service?**

- A. Azure AI Language – Text Analytics + Custom classification
- B. Azure AI Translator
- C. Azure AI Vision
- D. Azure AI Search

Answer: A

Explanation: **Azure AI Language** offers **sentiment**, **key phrases**, **NER/PII**, and **custom classification**. [\[learn.microsoft.com\]](#)

72. **A help center needs automatic question answering over uploaded PDFs. Choose the feature.**

- A. Azure AI Language – Question Answering
- B. Azure AI Search only
- C. Azure AI Translator
- D. Azure AI Speech

Answer: A

Explanation: **Question Answering** extracts answers directly from documents/URLs with minimal setup. [\[learn.microsoft.com\]](#)

73. **You need language detection and translation before summarization. Which sequence is correct?**

- A. Translator (detect+translate) → Language (summarize)
- B. Vision → Search → Language
- C. Speech → Search
- D. Content Safety → Translator

Answer: A

Explanation: **Translator** handles **detect/translate**; **Language** handles **summarization**. [\[learn.microsoft.com\]](#), [\[learn.microsoft.com\]](#)

74. **A healthcare app must extract clinical entities from medical text. Which capability applies?**

- A. Azure AI Language – Text Analytics for health
- B. Azure AI Translator
- C. Azure AI Vision
- D. Azure AI Speech

Answer: A

Explanation: **Text Analytics for health** extracts clinical concepts/entities from medical text. [\[learn.microsoft.com\]](https://learn.microsoft.com)

75. **You want to redact PII in logs and store masked text. Which feature?**

- A. Azure AI Language – PII detection
- B. Azure AI Content Safety – Protected material
- C. Azure AI Translator
- D. Azure AI Speech

Answer: A

Explanation: **PII detection** identifies sensitive entities for masking/redaction. [\[learn.microsoft.com\]](https://learn.microsoft.com)

76. **A global site needs dynamic dictionary lookups during translation (back-translations/examples). Which service provides this?**

- A. Azure AI Translator – Dictionary APIs
- B. Azure AI Language
- C. Azure AI Vision
- D. Azure OpenAI

Answer: A

Explanation: **Translator v3** includes **Dictionary** and **examples** APIs for language pairs. [\[learn.microsoft.com\]](https://learn.microsoft.com)

77. **You must orchestrate conversation intents and entity extraction for a bot. Which Language feature?**

- A. Conversational Language Understanding (CLU)
- B. Question Answering only
- C. Sentiment only
- D. Translator

Answer: A

Explanation: **CLU** supports **intent classification** and **entity extraction** for conversational bots. [\[learn.microsoft.com\]](https://learn.microsoft.com)

78. **You need to summarize call transcripts and then detect sentiments per speaker. Which combo?**

- A. Language Summarization + Sentiment
- B. Translator + Vision
- C. Search + OpenAI only
- D. Speech only

Answer: A

Explanation: **Language** provides **conversation/document summarization** and **sentiment/opinion mining**. [\[learn.microsoft.com\]](https://learn.microsoft.com)

79. **A compliance team requires detection of copyrighted text in LLM output. Which service supports this?**

- A. Azure AI Content Safety – Protected material detection
- B. Azure AI Language – PII
- C. Azure AI Translator
- D. Azure AI Vision

Answer: A

Explanation: **Protected material detection** identifies known copyrighted text in AI outputs. [\[learn.microsoft.com\]](https://learn.microsoft.com)

80. **You need end-to-end NLP features and training resources under Azure's AI hub. Where do you begin?**

- A. Microsoft Foundry docs
- B. Azure DevOps docs
- C. Windows ML docs
- D. Power BI docs

Answer: A

Explanation: **Microsoft Foundry** centralizes docs for **Language, Speech, Vision, Translator, Search**, etc. [\[learn.microsoft.com\]](https://learn.microsoft.com)

Part 5 — 10 MCQs: Select the appropriate service in Cognitive Services for a speech solution

81. **Requirement: Real-time transcription of calls with speaker attribution. Choose the service.**

- A. Azure AI Speech
- B. Azure AI Language
- C. Azure AI Translator
- D. Azure OpenAI

Answer: A

Explanation: **Azure AI Speech** supports **real-time STT** and **speaker recognition/diarization**. [\[learn.microsoft.com\]](https://learn.microsoft.com)

82. **Requirement: Bulk transcription of many stored audio files nightly. Which capability?**

- A. Speech containers
- B. Batch transcription
- C. Text-to-speech
- D. Pronunciation assessment

Answer: B

Explanation: **Batch transcription** is designed for large audio workloads via REST/CLI. [\[learn.microsoft.com\]](https://learn.microsoft.com)

83. **Requirement: Real-time spoken language translation for contact center calls. Choose the service.**

- A. Azure AI Speech (translation)
- B. Azure AI Translator only

- C. Azure AI Language
- D. Azure AI Video Indexer

Answer: A

Explanation: **Speech translation** converts **spoken audio** from one language to another in real time. [\[learn.microsoft.com\]](https://learn.microsoft.com)

84. **Requirement: Natural-sounding TTS with custom brand voice. Which service?**

- A. Azure AI Speech – text-to-speech + custom voice
- B. Azure AI OpenAI
- C. Azure AI Translator
- D. Azure AI Language

Answer: A

Explanation: **Speech** supports **TTS** and **custom voices** built from target datasets. [\[learn.microsoft.com\]](https://learn.microsoft.com)

85. **Requirement: Offline pronunciation assessment for e-learning. Which service?**

- A. Azure AI Speech – Pronunciation assessment
- B. Azure AI Language
- C. Azure AI Translator
- D. Azure AI Vision

Answer: A

Explanation: **Speech** includes **pronunciation assessment** to evaluate spoken language quality. [\[learn.microsoft.com\]](https://learn.microsoft.com)

86. **You want a lower-cost option for speech generation compared to Whisper-style models for chat. Which doc guidance applies?**

- A. Use Azure AI Speech instead of OpenAI Whisper for TTS
- B. Use Azure AI Translator
- C. Use Azure AI Vision
- D. Use Azure AI Search

Answer: A

Explanation: The architecture guidance notes **Speech** can be used as a **lower-cost** alternative for natural-sounding speech generation compared to OpenAI models. [\[learn.microsoft.com\]](https://learn.microsoft.com)

87. **Requirement: Run speech services at the edge in containers for compliance. Which documentation helps?**

- A. Speech containers docs
- B. Translator reference
- C. Content Safety containers only
- D. Video Indexer Arc

Answer: A

Explanation: **Speech** supports **containers/edge** deployments; consult **Speech containers** docs and supported languages. [\[learn.microsoft.com\]](https://learn.microsoft.com)

88. **Requirement: Intent recognition from spoken utterances (voice commands). Which approach?**

- A. Speech + CLU (Language)

- B. Translator only
- C. Vision only
- D. Search only

Answer: A

Explanation: Use **Speech** to capture utterances and **Conversational Language Understanding** to classify intents/entities. [\[learn.microsoft.com\]](https://learn.microsoft.com), [\[learn.microsoft.com\]](https://learn.microsoft.com)

89. **Requirement: Add TTS to Immersive Reader reading experience. What's the correct statement?**

- A. Immersive Reader embeds read-aloud features; Speech is not required in the app flow.
- B. Must use Speech SDK directly.
- C. Translator handles TTS.
- D. Language handles TTS.

Answer: A

Explanation: **Immersive Reader** includes **Read Aloud** configuration options (voice/speed) within its SDK experience. [\[learn.microsoft.com\]](https://learn.microsoft.com)

90. **Requirement: Multi-language live transcription across meeting rooms with accurate diarization. Choose the service.**

- A. Azure AI Speech
- B. Azure AI Translator
- C. Azure AI Language
- D. Azure AI Vision

Answer: A

Explanation: **Speech** offers **live STT** with **speaker recognition** and broad language coverage. [\[learn.microsoft.com\]](https://learn.microsoft.com)

Part 6 — 10 MCQs: Select the appropriate Applied AI services

91. **Which service is explicitly categorized as an Azure Applied AI service to improve reading comprehension?**

- A. Azure AI Immersive Reader
- B. Azure AI Video Indexer
- C. Azure AI Language
- D. Azure AI Search

Answer: A

Explanation: **Immersive Reader** is marketed as an **Applied AI service** enhancing reading/writing experiences. [\[azure.microsoft.com\]](https://azure.microsoft.com)

92. **Which service extracts deep insights from videos and provides a portal and Arc-enabled edge option?**

- A. Azure AI Video Indexer
- B. Azure AI Immersive Reader
- C. Azure AI Vision
- D. Azure AI Language

Answer: A

Explanation: **Video Indexer** provides cloud portal and **Arc-enabled** deployment for live/edge processing. [\[learn.microsoft.com\]](#), [\[learn.microsoft.com\]](#)

93. **An education app needs line-focus, translation, and read-aloud in a single SDK to improve literacy. Which service?**

A. Azure AI Immersive Reader
B. Azure AI Translator
C. Azure AI Speech
D. Azure AI Language

Answer: A

Explanation: **Immersive Reader** bundles **line focus, translation, read-aloud** for literacy experiences. [\[learn.microsoft.com\]](#)

94. **A media solution wants to auto-generate video segment summaries using LLM prompts over indexed insights. Which service feature applies?**

A. Azure AI Video Indexer – LLM prompts
B. Azure AI Immersive Reader
C. Azure AI Search
D. Azure AI Translator

Answer: A

Explanation: **Video Indexer with LLM prompts** produces summaries/search across video segments. [\[learn.microsoft.com\]](#)

95. **To quickly try video indexing without coding, the recommended first step is:**

A. Use the Video Indexer web portal quickstart
B. Deploy Azure Functions
C. Use Azure Batch
D. Build a microservice

Answer: A

Explanation: **Quickstart** guides you through the **Video Indexer portal** to upload and index videos. [\[learn.microsoft.com\]](#)

96. **Your solution requires live detection of people and vehicles with bounding boxes and counts. Which Applied AI service supports this?**

A. Azure AI Video Indexer live insights
B. Azure AI Immersive Reader
C. Azure AI Vision – Image Analysis only
D. Azure AI Content Safety

Answer: A

Explanation: **VI live insights** detect **people/vehicles** with bounding boxes and counts in real time. [\[learn.microsoft.com\]](#)

97. **You need to implement Immersive Reader in a Node.js app with Microsoft Entra authentication. Which doc helps?**

A. Immersive Reader quickstart (Node.js)
B. Azure AI Speech quickstart
C. Azure AI Translator quickstart

D. Azure AI Language quickstart

Answer: A

Explanation: The **Immersive Reader quickstart** provides **Node.js** steps with **Entra auth** setup. [\[learn.microsoft.com\]](https://learn.microsoft.com)

98. **You want to script the creation of Immersive Reader resources and Entra configuration via PowerShell. Which doc?**

A. Immersive Reader “Create resource” PowerShell article

B. Speech containers guide

C. Translator reference

D. Video Indexer quickstart

Answer: A

Explanation: The **Create Immersive Reader resource** article includes a **PowerShell script** for resource and Entra setup. [\[learn.microsoft.com\]](https://learn.microsoft.com)

99. **A literacy solution needs read-aloud autoplay and adjustable voice/speed. Which configuration applies?**

A. Immersive Reader Read Aloud options

B. Translator profanity controls

C. Speech pronunciation assessment

D. Language summarization

Answer: A

Explanation: **Read Aloud options** include **autoplay**, **voice**, and **speed** settings within Immersive Reader. [\[learn.microsoft.com\]](https://learn.microsoft.com)

100. **Which page provides a consolidated view of Azure AI services (tools), including retirement status for older services?**

A. What are Foundry Tools?

B. Azure DevOps

C. Power BI

D. Windows ML

Answer: A

Explanation: **Foundry Tools overview** enumerates services and notes **retiring** ones (e.g., Personalizer, Anomaly Detector). [\[learn.microsoft.com\]](https://learn.microsoft.com)

Tips for Studying Service Selection (AI-900)

- **Know the core families:** Language, Vision, Speech, Translator, Search, Document Intelligence, Content Safety, Bot Service, OpenAI—and how they pair for complete solutions (e.g., **Search + OpenAI** for **RAG**). [\[learn.microsoft.com\]](https://learn.microsoft.com)
- **Track renames & retirements:** Cognitive Services → **Azure AI Services**; **Cognitive Search** → **Azure AI Search**; **Form Recognizer** → **Document Intelligence**; **QnA Maker** replaced by **Question Answering**; **Personalizer/Anomaly Detector** are **retiring**. [\[learn.microsoft.com\]](https://learn.microsoft.com), [\[learn.microsoft.com\]](https://learn.microsoft.com), [\[learn.microsoft.com\]](https://learn.microsoft.com), [\[learn.microsoft.com\]](https://learn.microsoft.com)
- **Leverage Azure Learn study guide:** The **AI-900 Study Guide** outlines current skills measured. [\[learn.microsoft.com\]](https://learn.microsoft.com), [\[learn.microsoft.com\]](https://learn.microsoft.com)
